***Response to Arguments***

Applicant's arguments filed on 8/01/2008, with respect to Claims 1 – 33 have been fully considered and are persuasive. The obviousness-type double patenting of Claims 1 – 33 has been withdrawn and in view of amended independent claims, the prior art rejections have been withdrawn.

***Allowable Subject Matter***

Claims 1-10, 12-21 and 23-32 are allowed. Claims are renumbered as 1-30.

The following is an examiner's statement of reasons for allowance: The Admitted prior art Gupta et al. (U.S. Patent 7,234,168) disclose "A method of provisioning a computer against computer attacks includes constructing a hierarchy characterizing different computer attacks and counter measures, and traversing this hierarchy to identify computer attacks and counter-measures relevant to a target platform. Detection and protection measures are collected in response to this traversing. These detection and protection measures are then downloaded to a security sensor associated with the target platform".

However, the admitted prior arts do not disclose, teach or suggest "retrieving connection pairs from a connection table for a host that is attempting to gain access to another host in a networked computer system;

determining whether that one host attempting to gain access has accessed the other host accessed previously; and if that one host has not accessed the other host previously,

determining if other anomalies in the connection patterns of each host exist to establish an event severity level indicating a likelihood that the host attempting to access another host is attempting an unauthorized access.

Art Unit: 2136

determining whether conditions exist to decrease the severity level assigned to an event;  
and if an event is still indicated,

sending an event warning message with a determined level of severity to an operator”.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”

An examiner’s amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner’s amendment was given in a telephone interview with Denis G. Maloney (Registration number 29,670) on August 14, 2008.

Art Unit: 2136

IN THE CLAIMS:

1. (Amended) A computer implemented method comprising:  
retrieving connection pairs from a connection table for a host that is attempting to gain access to another host in a networked computer system;  
determining whether that one host attempting to gain access has accessed the other host accessed previously; and if that one host has not accessed the other host previously,  
determining if other anomalies in the connection patterns of each host exist to establish an event severity level indicating a likelihood that the host attempting to access another host is attempting an unauthorized access,  
determining whether conditions exit to decrease the severity level assigned to an event;  
and if an event is still indicated,  
sending an event warning message with a determined level of severity to an operator.
11. (cancelled)
12. (Amended) A computer program product embodied on a computer readable medium for detecting unauthorized access in a computer network comprising instructions for causing a computing device to:  
retrieve connection pairs from a connection table for a host that is attempting to gain access to another host;  
determine whether that one host attempting to gain access has accessed the other host accessed previously; and if that one host has not accessed the other host previously,  
determine if other anomalies in the connection patterns of each host exist to establish an event severity level indicating a likelihood that the host attempting to access another host is attempting an unauthorized access.

Art Unit: 2136

determining whether conditions exit to decrease the severity level assigned to an event;  
and if an event is still indicated,

sending an event warning message with a determined level of severity to an operator.

22. (cancelled)

23. (Amended) Apparatus comprising:

a processing device;

a memory;

a computer readable medium storing a computer program product for detecting  
unauthorized access in a computer network comprising instructions for causing the device to:  
retrieve connection pairs from a connection table for a host that is attempting to gain  
access to another host;

determine whether that one host attempting to gain access has accessed the other host  
accessed previously; and if that one host has not accessed the other host previously,

determine if other anomalies in the connection patterns of each host exist to establish an  
event severity level indicating a likelihood that the host attempting to access another host is  
attempting an unauthorized access.

determining whether conditions exit to decrease the severity level assigned to an event;  
and if an event is still indicated,

sending an event warning message with a determined level of severity to an operator.
